

The East European Plain on the Eve of Agriculture (British Archaeological Reports British Series)

This useful survey aims to bring a vast amount of research and data on the Mesolithic and early Neolithic of eastern Europe to a wider English speaking audience. It consists in the main of a series of regional overviews, each presented by a specialist from that territory. They discuss important and recently excavated sites, and present radiocarbon sequences. The book also contains broader theoretical articles, and syntheses of important issues and approaches which cover the entire eastern European region.
