

Commentaries on the History of England: Earliest the Earliest Times (Classic Reprint)

The following pages are an attempt to interpret the History of England in accordance with the latest researches; they are a digest and a commentary rather than an abstract or an epitome. There is no want of historical manuals, but readers of history, and even professed students, are not always aware what great additions are being silently made year by year to the materials from which that history is compiled. A fresh collocation of facts thus becomes necessary from time to time, and the proportion which one set of facts was supposed to bear to another suffers a change which comes upon us almost by stealth. The fine monographs which have been composed upon particular persons, reigns, and periods do in fact tend to obscure this vital element of truth and proportion in the general history of the nation. Each has its day; but time alone can lodge it in its proper correlation with the rest, often a very different place from that which was at first assigned to it. These remarks do not apply in the same degree to English constitutional, or literary, or even economic history, concerning which sufficient guidance is available from recent books. It will be observed that the reader is supposed to be acquainted with one or more of the ordinary manuals, and thus to be able to dispense for the most part with references.
